

Lockers for firefighters and emergency services

POLAK lockers for firefighters and emergency services were developed in collaboration with fire brigades, ensuring they meet the essential requirements for the demanding operations of these units. The lockers are designed in various configurations to suit both clean environments and emergency response areas that require separated wardrobe compartments. They feature an anti-pry door mechanism with an opening angle of more than 90°. A wide range of accessories provides everything that emergency services require for their challenging profession.

helmet holder

Can be placed on the top of the locker, height 210 - 310 mm (adjustable in 20 mm increments)

document slot

For convenient document insertion without opening the door (size: 200 x 22 mm)

wardrobe rail with metal hooks

Metal wardrobe rail with three hooks in each locker compartment, the rigid rail construction allows for hanging heavy garments

perforated rail for hanging accessories

Several types of hooks can be attached to the perforated rail

locks

Three types of locks - Mechanical combination lock, Cylinder lock, Padlock latch

perforated bottom

for dirt drainage and locker ventilation

legs

height 120 mm, height-adjustable

Order code	Width of wardrobe mm
XP25	250
XP30	300
XP40	400
XP45	450
XP55	550

Cannot be ordered separately

Locking systems

Available lock options for lockers

Mechanical Combination Lock (Locker order number + “MC1” or “MC2”)

Operated via a personal four-digit code (up to 9,999 combinations) without the need for a key. Private version: features one fixed, pre-set code. Public version: each user sets their own code. In the event of a forgotten code, the lock can be opened using a master key or a master code.

Padlock Latch (Locker order number + “PU1”)

Operated using any standard padlock, with no need for an integrated key. Once a padlock is engaged, the security latch spins freely—this prevents forced rotation of the latch within the mounting hole and protects the door from damage. Universal version: each user provides their own padlock. Supplied without a padlock.

Cylinder Lock (Locker order number + “PZ1”)

Operated by a classic cylinder system with a single-point bolt, requiring no complex setup. Each lock includes two keys, ensuring easy access and control over the locked space. This option is ideal for traditional locker solutions where the emphasis is on the simplicity and reliability of mechanical locking.

Mechanical combination lock

Order number	Purpose
locker code + MC1	private
locker code + MC2	public
GK-EL	master key

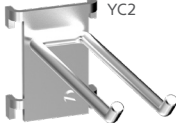

Hooks

Version	Order number	W x D mm
Double-bend	YC1	15 x 45
Double-bend	YC2	15 x 90
Double-bend	YC3	30 x 35
Double-bend	YC4	45 x 35
